Rozwiązania

0.1

- You can run Docker image with the following command: `docker run -p 1101:1101 mazurkatarzyna/bsk-book-p1-ch0-ex01:latest`. Server will be available at http://127.0.0.1:1101.
- You can check `cURL's` help: `curl -- help`.

0.2

- Check out Scapy documentation.
- Take a look at `rdpcap` method.

0.3

- You can use Python's binascii module.

0.4

- You can run Docker image with the following command: `docker run -dp 1104:80 mazurkatarzyna/bsk-book-p1-ch0-ex04`. Server will be available at http://127.0.0.1:1104.
- You can check out the `ncrack` tool (https://nmap.org/ncrack/).

0.5

- You can run Docker image with the following command: `docker run -dp 1105:80 mazurkatarzyna/bsk-book-p1-ch0-ex05`. Server will be available at http://127.0.0.1:1105.
- You can check `cURL's` help: `curl -- help`.

0.6

- You can use Python's requests module.

0.7

- You can run Docker image with the following command: `docker run -dp 1107:1107 mazurkatarzyna/bsk-book-p1-ch0-ex07`. Server will be available at http://127.0.0.1:1107.

0.8

- You can use Python's requests module.

0.9

- You can run Docker image with the following command: `docker run -dp 1109:5230 -v  /.memos/:/var/opt/memos mazurkatarzyna/bsk-book-p1-ch0-ex09:latest`. Server will be available at http://127.0.0.1:1109.
- Catch the request of changing the username and analyze it

0.10

- You can run Docker image with the following command: `docker run -v /backups:/backups -dp 1110:8080 mazurkatarzyna/bsk-book-p1-ch0-ex010:latest`. Server will be available at http://127.0.0.1:1110.

0.11

- You can run Docker image with the following command: `docker run -net=host mazurkatarzyna/bsk-book-p1-ch0-ex011`, server will be available at http://127.0.0.1:5230.
- Check out API (you can use BurpSuite).
- Run Python server: `python3 server_img.py`, server will be available at http://127.0.0.1:8888.
- Check out the structure of the SVG images.
